Science Center Staff,

It has come to my attention you are considering utilizing M. Kaser & Associates, Inc. (MKA) for an upcoming display project.

We have had the pleasure of working with Matt Kaser's organization since 1992. During this time, he has designed and produced several projects for our Frank T. Harrison, Jr. Visitor Center. This included an interactive computer video film collection and a fully animated model of the nuclear fuel cycle. The model, which featured two joystick operated cranes, was by far children's favorite (and many adults too). By using the joysticks, the children were able to get a hands-on understanding of the technology and science in a fun and easy to comprehend manner.

Since installation these displays have been near flawless. Each and every display has stood up extremely well to the rugged abuse by thousands of visitors and school groups. In addition, MKA has always been readily available when questions or issues did arise.

I highly recommend MKA to any organization considering his services.

Regards,
